PROJECT WORKS:

Title: Citric acid production by *Aspergillus niger* using banana extract – (Nov-2009 to May-2010)

Project Guide : Dr. Sridharan, Associate Professor

Funded by : Dept. of Biotechnology, VIT

Description: I found that even Citric Acid can be produced from Banana Extract/Pulp but at very lower levels. In fact banana doesn't contain citric acid but even then *Aspergillus Niger* uses pulp as substrate and grows on it because it contain all other sources for the growth of organism other than Citric acid. Finally fungus doesn't require not only citrus fruits to produce citric acid but also any other source where it can grow, but comparatively at lower levels
